HYBRIDFLUSH® Accessories (SOLD SEPARATELY)

Push Button Conversion Kit (PBCK)

The Push Button Conversion Kit (PBCK) includes a push button and spring that replaces the existing flush handle and spring to convert it into a mechanical push button.

By using the push button with the **HYBRIDFLUSH®** system the user is able to flush the urinal or toilet manually even when the batteries on the **HYBRIDFLUSH®** system are drained. Installation of the push button also solves the “handle kicking problem” usually associated with flushometer handles therefore reducing maintenance from leaky seals and extending the life of the flushometer.

Push Button Complete (PB-C)

The Push Button Complete Assembly (PB-C) includes all the necessary parts of the push button that replaces the existing cap to convert it into a mechanical push button. Normally, the PB-C is used when changing from an existing automatic flush valve that requires the handle area to be capped off.

By using the push button with the **HYBRIDFLUSH®** system the user is able to flush the urinal or toilet manually even when the batteries on the **HYBRIDFLUSH®** system are drained. Installation of the push button also solves the “handle kicking problem” usually associated with flushometer handles therefore reducing maintenance from leaky seals and extending the life of the flushometer.

Handle Cover (HC801)

The Handle Cover (HC801) is used to cap off handle area when the manual handle or the push button is not desired.
