FOR IMMEDIATE RELEASE

New Upgraded Features to the HYBRIDFLUSH® Model AEF-801 Automatic Flush Valve System

WOODLAND HILLS, CA (June 2005) - AMTC introduces the newest version of the HYBRIDFLUSH® Model AEF-801 Automatic Flush Valve System for urinals and toilets. This unit is the most reliable choice for commercial facilities having multiple urinals and toilets simply because it allows you to keep the original manual flush handle to use as a courtesy flush option or as an alternate mechanical backup when batteries are drained. The newest version is made up of an improved high quality finish and is powered by 4 AA batteries, includes an angle adjustable sensor beam, an improved mechanism with a built-in failsafe feature, can be electrically powered using an optional 6-Volt DC power adapter kit, and has a push button conversion kit available to convert the flush handle into a push button if desired. These added features and the overall reliability of the HYBRIDFLUSH® Model AEF-801 Automatic Flush Valve System make it the most advanced and complete automatic flush valve on the market.

About AMTC

AMTC is a leading manufacturer of advanced plumbing systems and water conservation devices for commercial applications. The company specializes in “touch-free” electronic flush valves, urinal and commercial toilet systems, electronic faucet systems, and electronic soap dispenser systems. All of AMTC’s electronic plumbing systems utilize its proprietary Micro-Cam Technology as a more reliable alternative to solenoid technology usually found in most competitor systems.
